Message from the eNews Editor

by *Katherina Psarra*
eNews Editor

Dear colleagues,

In this issue of the eNews you will find a lot of information regarding the educational programs young scientists can benefit from. It is in the great interest of the IFCC community to help new colleagues to acquire as many skills as possible in order to become competitive in their field. This is for the benefit of the new professionals as well as for the Health system itself

One more topic of great interest presented in this issue, is that of the visiting professors. You will see that from this program, a lot of societies gain the chance to have the best speakers in the field in their Congresses with very low cost. Do not hesitate to participate in this program.

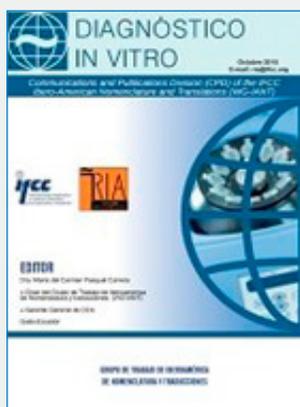

The achievements of the great groups rewarded by Univants are also of great interest for the readers. And don't forget to be inspired by the reports of the congresses and courses organized by the national societies.

Warm regards

Katherina Psarra

IFCC WorldLab SEOUL 2020

24th INTERNATIONAL CONGRESS OF
CLINICAL CHEMISTRY AND LABORATORY MEDICINE

May **24-28**, 2020
Coex, Seoul, Korea

THE VOICE OF IFCC

VLP Report from Marrakech, Morocco

by **Tomris Ozben**
IFCC Treasurer

I would like to express my sincere gratitude to the EMD-VLP Committee and Abbott company for supporting my attendance to the 2019 meeting hosted by the Société Marocaine de Chimie Clinique (SMCC).

The 6th AFCC Regional Meeting was organized jointly with the 19th Moroccan Congress of Clinical Biology which was held in the Congress Center (Palais des Congrès) of Marrakech, Morocco from 25 to 28 September 2019.

The Congress was organized under the High Patronage of His Majesty King Mohammed VI. The meeting took place for four and a half days and included several symposia, plenary lectures, industry-sponsored educational workshops and posters presented by young and experienced scientists.

IFCC supported the meeting by sponsoring two symposia and travel grants for young scientists provided by Roche company.

Prof. Benahmed Mohamed, from France delivered the opening lecture titled “**Environmental and epigenetic origin of chronic non-communicable diseases: mechanisms and tools for integrative medicine**” on October 25, 2019. It was followed by the Opening Ceremony with live cultural music and performances and Cocktail.

On October 26, 27 and 28, the meetings started with Plenary lectures held at 09:00 - 10:00 in the Ambassador Hall for all participants. Following the plenary lectures, presentations were held at three different meeting halls in parallel.

On Friday, September 27, I delivered the plenary lecture titled “**Basic principles of epigenetics and epigenetic regulation in cancer therapy**”. The moderator of my lecture was LAHRICHI Mohammed from Morocco. A gala dinner with live music was organized that night for the participants of the meeting.

Prof. Tomris Ozben, IFCC VLP, delivering her lectures at the 6th AFCC Regional Meeting and the 19th Moroccan Congress of Clinical Biology - Marrakech, Morocco from 25 to 28 September 2019

On Saturday, September 28, I presented a lecture on **“Liquid Biopsy”** during the Cancer Genomics Symposium session.

The Posters Exhibition and Commercial Exhibition were held every congress day. Visits to Posters and Commercial Exhibitions were organized during coffee and lunch breaks.

On September 28, 2019, Pierre Flori from France delivered the closing lecture of the Congress, titled **“Perspectives for the development of medical biology in Francophone Africa: the eyes of a humanitarian actor”**.

The Congress was ended by the closing address and review of the congress.

A gala dinner for the participants at the meeting

News from the IFCC Committee for Evidence-Based Laboratory Medicine (C-EBLM)

by Prof. Annalise Zemlin

Chair, IFCC C-EBLM

Head of Chemical Pathology Division, Department of Pathology

Faculty of Medicine and Health Sciences

Stellenbosch University and NHLS Tygerberg Hospital

Cape Town, South Africa

Members of the IFCC Committee for Evidence-based Laboratory Medicine (C-EBLM) and of the American Association for Clinical Chemistry Personalised Medicine Division (AACC PM Division), held a joint symposium titled “Evidence-based Laboratory Medicine and Personalised Medicine” on Friday 27th September at the 6th Congress of the African Federation of Clinical Chemistry and Laboratory Medicine and the 19th Moroccan Congress of Clinical Biology, which was held in from 25th to 28th September 2019 at Marrakech, Morocco.

The following talks were presented:

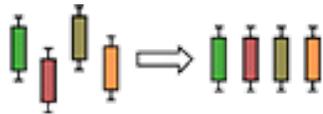

- Evidence-based Laboratory Medicine – what it is and what it is not – Karina Rodriguez-Capote (member of IFCC C-EBLM)
- Personalised Medicine – what it is and what it is not – Xander van Wijk, member AACC PM Division.
- Personalised Medicine and Evidence-based Laboratory Medicine: Friend or Foe? – Annalise Zemlin, chair IFCC C-EBLM
- Data science enabling personalised medicine – Maurizio Ferrari, IFCC President

IFCC C-EBLM and the AACC Personalised Medicine Division joint symposium presenters

(L-R): Karina Rodriguez-Capote, Xander van Wijk, Annalise Zemlin, Maurizio Ferrari

These talks were well received and led to interesting discussion. Hopefully there will be future collaboration between these 2 committees.

**International Consortium
for Harmonization of Clinical Laboratory Results**

Workshop Announcement

Barriers to global standardization of clinical laboratory testing: reference materials and regulations

29-30 May, 2020 - SEOUL, KOREA

Immediately following IFCC WorldLab 2020 - <http://www.seoul2020.org/2020/home>

This workshop will address the barriers to implementing global metrological traceability of clinical laboratory methods. Differences in country or region specific reference materials and regulatory requirements are barriers to standardization. ISO standards with JCTLM certified reference materials, reference measurement procedures and protocols provide tools for global standardization. Workshop topics will address technical and regulatory issues, impact of new biomarkers and technologies, approaches to prioritization of tests for standardization, and conclude with issuing recommendations for improved approaches to achieve globally standardized patient test results.

Presented under the auspices of

The IFCC-Abbott Visiting Lectureship Programme: building bridges and exchanging knowledge

by Nader Rifai
IFCC, VLP Chair

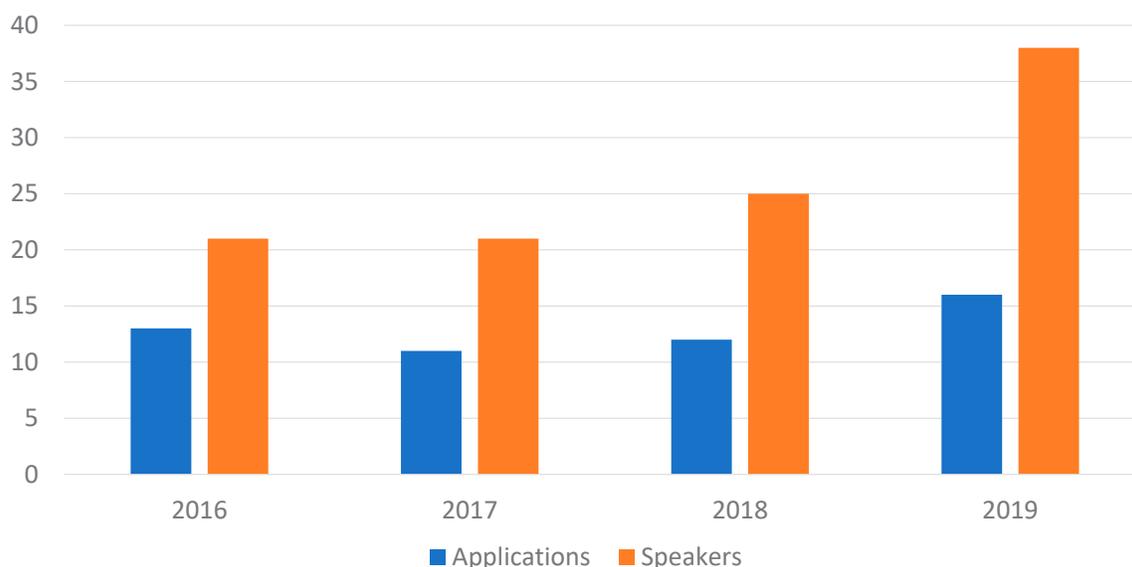

With the generous support of Abbott Diagnostics, the Visiting Lectureship Programme (VLP) of the IFCC has been an excellent tool to enhance interaction between laboratory medicine professionals from around the world. Through the VLP, national societies can apply for funding to enable prominent scientists to participate in a national or regional meeting. The visiting lecturer is expected to deliver two lectures or a lecture and an interactive workshop. In addition, the visiting lecturer may be asked to record a shortened version of the talks (~20 min) to enhance the IFCC eAcademy. While the host society provides accommodation, local transportation and meals for the visiting lecturers, the VLP covers the cost of transportation from the home country.

The application process is very simple and forms can be easily downloaded from the IFCC website. After a brief review by the IFCC staff for completeness, the application is examined by the VLP committee members.

Since 2016, the numbers of applications and participating speakers have been increasing (figure 1). During that period, 52 applications from various regions of the world have been funded. The topics discussed span across all subjects in laboratory medicine including quality control, accreditation, standardization and harmonization, reference ranges and molecular diagnostics applications.

Because of the success of this program, Abbott Diagnostics increased recently its support to enable more national societies to take advantage of this opportunity. So in 2019, significant efforts have been made toward increasing awareness of this program. Going forward, the VLP committee is aiming to continue to reach out to and work closely with societies' representatives from around the globe with the goal of increasing funded applications number to 25 in 2020. Therefore, we strongly encourage national societies to apply for VLP funding for their upcoming meetings and congresses. The needed information and forms can be downloaded using this link: <https://www.ifcc.org/ifcc-education-division/emd-special-projects/>.

Change in the Numbers of Approved
Applications and Speakers

VLP Report from the Israel Society for Clinical Laboratory Sciences: Cardiac Biomarker Symposium

by Dr. Marielle Kaplan

*Director, Clinical Laboratories Division & Clinical Biochemistry Laboratory
Rambam Health Care Campus, Haifa, Israel*

Senior Lecturer, The Rappaport Faculty of Medicine, Technion, Haifa, Israel

The Israel Society for Clinical Laboratory Sciences held a symposium on Cardiac Biomarkers, entitled: **High Sensitive Troponin: Present and Future**, that took place from September 24-26 2019 at the Bar Ilan University, in Tel Aviv Israel.

The meeting organizing bodies included:

The Israel Society for Clinical Laboratory Sciences (IS-CLS), The Bar-Ilan University, The Israel Science Foundation (ISF) and the Bar-Ilan Institute of Nanotechnology and Advanced Materials (BINA)

Moreover, the symposium was held under the auspices of the International Federation of Clinical Chemistry (IFCC) & The European Federation of Clinical Chemistry and Laboratory Medicine (EFLM)

The aim of this symposium was to address clinical and diagnostic issues regarding cardiac biomarkers in general and the troponin test in particular.

The conference covered various issues regarding the Implementation of high sensitivity Troponin in the real world using rule-out and rule-in algorithms; the

Reclassification of MI based on troponin; and Use of Troponin in the Community for Risk Assessment of Cardiovascular Diseases.

Moreover, one session was dedicated to the use of natriuretic peptides for heart failure diagnosis and for prognosis. Finally, the conference presented the recent advances in detection technologies to detect cardiac biomarkers.

Our goal was also to emphasize the importance of developing the ability to establish a partnership plan for communication between the laboratory and emergency medicine and cardiology providers on how to implement hs-cTn testing in clinical practice along international evidence-based and expert opinion guidelines.

We had the honor to include prestigious guests in the International Scientific Committee:

- **Prof. Fred Apple** (*Hennepin County Medical Center/ University of Minnesota, USA*) presented lectures on Clinical Laboratory Practice Recommendations for the Use of High Sensitivity Cardiac Troponin as well as on the UTROPIA Approach for Implementation of High-Sensitivity Cardiac Troponin into Clinical Practice
- **Prof. Alan Jaffe** (*Mayo Clinic, USA*) delivered talks on potential problems of the Practical Implementation of High Sensitivity cardiac troponin and presented insights on Studies on the Use of Troponin for risk stratification of cardiovascular diseases versus Implementation in Individual Patients
- **Prof. Jack Ladenson** (*Washington University in St. Louis, USA*) presented a plenary lecture on the historical perspectives of the development of assays for cardiac biomarkers, in which he was personally involved.

Participants at the Symposium

Article continued on next page

The National Scientific Organizing Committee included:

Dr. Marielle Kaplan (Rambam Health Care Campus, Israel); Dr. Amos Danielli (Bar Ilan University, Israel); Prof. Offer Amir (Baruch Padeh Medical Center, Israel) and Prof. Oren Zinder (Formerly Rambam Health Care Campus, Israel).

We would like to deeply thank the VLP sponsorship and the Abbott Company for supporting the attendance of Prof. **Kristian Thygesen** (Aarhus University

Hospital, Denmark) that delivered a lecture on: “The Fourth Universal Definition of Myocardial Infarction”, as well as **Prof. Johannes Mair** (Innsbruck Medical University, Austria) that delivered a lecture on: “Troponin release from injured myocardium”. Moreover, Prof. Johannes Mair contributed also with a talk on: “ProBNP derived peptides in the circulation – impact of sacubitril treatment on BNP interpretation”.

Plenary lectures were also dedicated to present development in tissue engineering for restoring heart tissue after MI, including the use of stem cells and 3D printing. Prof. Marcelle Mahlouf (Technion, Israel) and Prof. Tal Dvir (Tel Aviv University, Israel) presented these topics.

The conference participants included laboratory directors, cardiologists, internal medicine physicians, clinical chemists, laboratory technologists, and biomedical engineers interested in learning strategies for developing and implementing high-sensitivity troponin tests.

The symposium was definitively a very significant event for our community. I would like to personally thank all the lecturers that took part in this event, as well as all the participants.

(L-R): The Israeli scientific committee: Dr. Danielli, Dr. Kaplan, Prof. Zinder

(L-R): Prof. Zinder, Dr. Kaplan, Prof. Mair, Prof. Jaffe, Dr. Apple, Prof. Thygesen, Prof. Ladenson

IFCC: THE YOUNG SCIENTISTS

IFCC-TFYS Webinar Series: a tool for education, training & networking

by Dr. Pradeep Dabla
Chair, IFCC-TFYS

Team is described simply as “a group of people who are working through collective endeavour toward a common goal”. Effective team working is an essential ingredient for any organisational success. Successful teams can help transform an organisation, increase outputs and deliver on organisational objectives.

IFCC built “**Team IFCC-TFYS**” to address the need for a support group to help young scientists for education, training & networking. IFCC-TFYS to cross the barrier and created a strong young scientists support Team involving more than 30 IFCC member countries using modern information technology & social media. We

delivered various educational programmes, to learn perspectives & principles of Laboratory Management & Leadership namely “IFCC-TFYS Survey”, “IFCC-TFYS Mentorship Programme”, “Research Booklet”, “Young Scientists Awards & Grants”, “Lab Surfing”, “Webinars”, “Symposia & Workshops” with the continuous support of National & International societies, senior members.

Webinar is a tool that provides computer mediated communication and can transmit video, audio, and images during the process. The information can be exchanged in a real-time and two-way format.

Team IFCC-TFYS last time all together @ [Budapest, Hungary](#)

Article continued on next page

Thus, it creates opportunities for both educators and multiple learners to experience real time interaction online irrespective of time & place.

Webinars are widely adopted as they can reduce travel expenses and travel time of participants. IFCC-TFYS initiated “Webinar Series Program” since 2016 and has delivered webinars successfully covering a range of topics close to the needs of young colleagues involving related experts as speakers.

The most recent webinar was conducted on **Monday, November 4th, 2019 (6:00 a.m. PST, USA)** titled **“Biochemical Genetics in Diagnosis and Monitoring of Inborn Errors of Metabolism”**.

It was delivered by **Prof. Khosrow Adeli** PhD, FCACB, DABCC, who is Head of Clinical Biochemistry, Paediatric Laboratory Medicine, The Hospital for Sick Children and Professor at the University of Toronto, Canada and is President Elect-IFCC. This webinar helped us to understand better the different lab diagnostic approaches and latest techniques available.

IFCC-TFYS Lab-Surfing: connecting young scientists

International community of Fellows, Residents Researchers and Students in Laboratory Medicine.

FIND YOUNG SCIENTISTS AROUND THE WORLD.
FEEL AT HOME WITH LOCALS.

lab surfing | INTERNATIONAL COMMUNITY OF SCIENTISTS, RESIDENTS, FELLOWS AND STUDENTS IN LABORATORY MEDICINE.

KNOWLEDGE COLLECTIVE CONSTRUCTION infobioquimica.org

by **Santiago Fares Taie**
Core-Member IFCC TFYS

Three years ago, the IFCC TF-YIS launched a programme called **Lab-Surfing.com**, with the main goal of improving communication among young scientists from all around the world.

Information & Communication Technologies (ICT) are tools that young scientists can easily learn and control. Since Lab-Surfing.com was launched, many young scientists had the opportunity to improve networking and cooperation among colleagues, especially by making exchange programs easier. Today, a total of 715 young colleagues, from 70 countries and with a median age of 32 years old form the Lab-Surfing community.

In **Lab-Surfing.com**, you can find relevant news about congresses and conferences, exchange programs, radio “El Microscopio”, webinars, job opportunities, etc.

Moreover, there is a discussion forum section where users can make questions to colleagues from a specific country or specific lab area (ex. Clinical chemistry, hematology, endocrinology, molecular biology, etc.). Finally, you will find a world map and a search engine that will assist you to find colleagues in different cities and/or countries.

International community of Fellows, Residents Researchers and Students in Laboratory Medicine.

HELP LAB-MATES WITH INFORMATION & OPPORTUNITIES.

IFCC Professional Exchange Programs: unique opportunity for young scientists

by Ann Gronowski

IFCC, Executive Board

Professor Pathology & Immunology

and Obstetrics & Gynecology

Washington University, School of Medicine

St. Louis, MO, United States

Did you know that the IFCC offers professional exchange scholarships each year to young scientists???

The purpose of the professional exchange programs is to:

- Promote international co-operation between laboratories
- Facilitate the exchange of young laboratory scientists between IFCC Member societies
- Share high level scientific or management skills
- Introduce new or improved scientific or management skills to the applicant's laboratory

There are two types of exchange programs: the Professional Scientific Exchange Program (PSEP) and the Professional Management Exchange Program (PMEP).

Appropriate projects might include a collaborative project between two laboratories, or acquiring a new skill set from the host laboratory, or learning how to prepare a laboratory for accreditation. The projects are up to the applicant and their host laboratory. This is an opportunity to develop collaborations that might not otherwise be possible.

Recipients of the scholarships receive travel expenses to the host laboratory and 1500 Swiss Francs per month for a maximum of 3 months for living expenses. At the completion of a professional exchange program the recipient is required to write a short report of his/her experience for publication in IFCC eNews and where appropriate, submit a scientific paper for publication in the electronic journal of IFCC.

(L-R): Dr. Alba Alonso Llorente, Prof. Céline Verstuylt, and all team members at Pharmacogenetics Laboratory, in the Hôpital Bicêtre, at Le Kremlin Bicêtre, France – a successful IFCC PSEP experience

To apply, the applicant must be a member of an IFCC full (or affiliate) member national society, be aged under 40 years at the time of the exchange program, and have not received funding from IFCC for other PEPs. The applicant must also have a specific project to complete in a designated host laboratory and have the written support from the national society, the host laboratory, and the head of department.

Please note that IFCC does not organize any practical details. Hosting laboratories and lodging details need to be identified and arranged by the applicant.

Applications can be emailed at any time to the IFCC Office (ifcc@ifcc.org).

For more information, please visit: <https://www.ifcc.org/ifcc-education-division/pep-professional-exchange-programme/>.

UNIFY FOR SOMETHING GREATER

The **UNIVANTS** of Healthcare Excellence Award program celebrates teams who have achieved measurably better outcomes in healthcare.

Serving the underserved: innovative viral hepatitis screening program enables timely detection

Gaia Nebbia
MD, Ph.D, MRCP,
FRCPath

Jane Mullen
BSc, MSc, FIMBS

Laura Hunter
MBChB, MRCP

Sam Douthwaite
MBChB, MRCP,
MTropMed, DipHIV

Terrence Wong
MA, MD, FRCP

Distinction awarded to team members at Guy's and St. Thomas' NHS Foundation Trust and Viapath Pathology Analytics, in London

Guy's and St. Thomas' NHS Foundation Trust, together with Viapath Pathology Analytics, is closing a healthcare gap for underserved populations across London. Viral hepatitis is recognized as a world-wide public health priority.

Hepatitis B (HBV) and hepatitis C (HCV) can disproportionately afflict those populations with barriers to healthcare access, who frequently only have a point of contact with healthcare in an Emergency Department (ED) visit. Due to the asymptomatic nature of these infections, many patients are unaware of being infected. When detected early, better outcomes may be achieved owing to recent significant advances in the clinical management of viral hepatitis. These barriers to detection in primary care settings require innovative and novel approaches to increase access to both testing and treatment. Without early treatment, serious complications such as liver cirrhosis, hepatocellular carcinoma and even death often occur.

Virologists, epidemiologists, ED physicians, clinical laboratorians, and pathologists collaborated and updated

guidelines and processes for HBV and HCV screening of ED patients. They implemented a novel electronic ordering and "opt-out" hepatitis screening program for ED patients using the updated guidelines and processes.

This program also included activation of a community follow-up nurse and the linkage to a care coordinator to more effectively connect appropriate patients to follow-up care. The screening program leveraged the abilities of information technologies to create the test order for appropriate patients, encouraging a high uptake of testing whilst minimizing the impact on busy ED clinicians. This information allowed the laboratory to know whether to test the patients' samples for using highly sensitive assays for HCV antibodies and antigens and HBV surface antigen detection. The screening program has a high participation rate, with greater than 70% of eligible patients opting to have their blood screened.

The screening program has detected previously unknown HBV and HCV infections in ED patients. Many

Article continued on next page

of these patients would not have been diagnosed until much later in the disease when they became symptomatic.

Of the newly diagnosed patients offered linkage, a high proportion were shown to engage in appropriate care (95% of HBV patients and 71% of HCV patients). This linkage to personalized care has reduced disease progression in these patients and has not only resulted in improved patient safety, but also in an estimated 33% lower annual healthcare costs for the patients with previously unrecognized infections.

This process has also improved the satisfaction of treating clinicians. “By screening in the ED we have the satisfaction of caring for people who are underserved and who typically do not receive care until a much later stage of liver disease and almost irreversible,” comments Laura Hunter MBChB (Consultant in Emergency Medicine). The increased satisfaction is experienced outside of the ED as well. Dr. Nicholas Price Ph.D., DTM&H (Director of Infectious Disease and Consultant physician) states, “Our involvement at the forefront of this important project benefitting our local community gives us a great sense of professional reward and pride.”

This team was awarded distinction by the UNIVANTS of Healthcare Excellence Program (www.UnivantsHCE.com) based on its measurable success for patients, clinicians, health systems, and payors. The global honor was assessed by leading global healthcare organizations including IFCC, AACC, EHMA, Modern Healthcare, HIMSS, NAHQ, and IHE through leadership and sponsorship by Abbott Laboratories.

THREE KEY TAKEAWAYS:

- Pathways to employ electronic ordering and opt-out strategies can significantly increase testing for HBV and HCV in an ED setting with minimal disruption to emergency patient care.
- Cross disciplinary involvement in viral hepatitis screening in the ED increases rates of follow-up and treatment for HBV and HCV which can reduce disease progression.
- Key performance outcomes for opt-in screening programs can include enhanced patient awareness, greater access to personalized care, increased clinician and administrator satisfaction, and reduced healthcare costs.

TriCore Reference Laboratories partners with MCO to improve prenatal care

Timely and appropriate prenatal care is crucial for the safety and well-being of both mothers and babies. Prenatal care includes pregnancy counseling, physical checkups, lab tests and delivery preparations. Standard of care guidelines recommend early and regular prenatal care to minimize possible gestational complications. Unfortunately, many expectant mothers do not receive optimal prenatal testing. Without the insights gained from timely laboratory testing, clinicians are often not able to reliably identify higher risk pregnancies or initiate appropriate interventions.

TriCore Reference Laboratories (TriCore) led an unprecedented partnership by teaming up with a large managed care organization (MCO), to develop and implement a statewide prospective program for expectant mothers who are covered by Medicaid. This

strategic and collaborative program integrated expertise from an interdisciplinary team that included laboratory medicine, information technology, pharmacy and the University of New Mexico Department of Obstetrics and Gynecology to determine the most important insights for improving prenatal care.

TriCore leveraged details from their laboratory information system to compare laboratory testing information with a list of MCO members to flag newly identified pregnant patients of the MCO's. This information would then be sent to MCO care coordinators who would then engage the identified patients in care.

Their well-designed solution has achieved extraordinary outcomes for patients, payors, clinicians and health systems. The program identified 13.4% more

patients in the first trimester than the state's baseline, decreasing NICU admission rates from 18.2% to 10.7%. Reducing NICU admissions has substantial emotional advantages to patients and their families, reducing anxiety while also mitigating substantial costs for payors. Clinician satisfaction was also increased as their solution allows timely data access for proactive risk stratification of patients before complications arise. Lauretta Dozier, Registered Nurse, states, "It is evident that our partnership with TriCore has expanded the Special Beginnings program and has assisted our team with surpassing enrollment numbers, never seen before in the New Mexico program."

This team was recognized, with distinction, by the 2019 UNIVANTs of Healthcare Excellence due to their unique clinical care coordination around the use and

communication of laboratory generated information with measurable improvement to healthcare.

THREE KEY TAKEAWAYS:

- Proactive prenatal care is imperative for optimal health and well-being of mothers and their babies.
- Strategic partnerships involving clinical laboratories and managed care organizations can ensure earlier identification of expecting mothers with actionable insights that maximize downstream utilization of clinical services for improved clinical outcomes.
- Key performance indicators of increased patient safety, improved partner relationships and decreased NICU admissions are possible with teamwork, laboratory leadership and strategic partnerships.

Innovation, leadership and strategic partnerships trigger unprecedented outcomes in Dubai

Consistent with its mission to enhance community engagement and foster innovative and integrated care models to transform healthcare in Dubai, the Dubai Health Authority (DHA) is known for core values in innovation, excellence, customer centricity, transparency, efficiency and workforce engagement. With leaders and integrated clinical care teams at DHA embodying these principles for over a decade, they've been able to achieve extraordinary outcomes as well as a growing list of prestigious international honors in recognition of their innovation and unity of action for the betterment of healthcare. Two of the most recent 2019 honors include the **International Business Silver Stevie Award** for the category of "Best Mobile

App – Government" and **Recognition of Achievement** for the 2019 **UNIVANTS of Healthcare Excellence Program** for their measurable better outcomes to patients, payors, clinicians and health systems. The recognition follows DHA's long-lasting commitment to providing a safe and adequate blood supply to all DHA hospitals and private hospitals throughout Dubai to save lives and meet the needs of patients undergoing blood transfusions.

Reliable access to safe blood is essential for optimal health outcomes. Access however can be a substantial challenge since blood products expire and eligible donors do not always donate blood (or do so routinely). "There is a continuous demand for all blood types,

(Centre): His Excellency Humaid Al Qutami and Dr. May Raouf holding the UNIVANTS of Healthcare Excellence Certificate, with (L-R) Mrs. Fatma Abbas, Dr. Farida Al Khaja, and Dr. Hussain Al Samt

as blood lasts for only 42 days, and so, donors are always needed to come forward to replenish stocks.” says Dr. May Yassin Raouf M.B.Ch.B, MSc, MD (Head & Medical Director, Dubai Blood Donation Center, Pathology & Genetics Department).

To overcome extraordinary health needs, extraordinary efforts are needed. Thus, the DHA led with unparalleled innovation. One of these efforts included strategic and mass activation of the inspirational “BE THE 1™” campaign, achieving increased population awareness and engagement. An integrated clinical care team strategically utilized marketing to build awareness and relevance for the cause, displaying invitations across all DHA buildings, cars and buses to “BE THE 1™” to make a difference. The initiative also directed marketing materials for use at companies, and importantly, universities and schools, reaching new audiences and attracting new donors. Community educational sessions and forums also enhanced overall awareness. The team also developed an app (named DAMMI) that educates people on blood donation and the supply needs. The app includes automated and smart registration for blood donors and the donor’s electronic questionnaire as well. Collectively, this targeted and strategic effort reached new demographics and facilitated unprecedented results for the community.

In the first year of the program, the number of units donated increased by 37%, with the percentage of

donors being classified as “young donors” (defined as between 18 and 21 years of age) going from 4.5% to 14% (a relative increase of 9.5%). Of the 20,000 additional donations in the first year, 43% were from new donors. The success of the initiative also reduced the supply gap by 8.9%, allowing for almost all requests for blood (99.2%) to be filled when needed. Interestingly, 4.4% of the newly screened blood donors were diagnosed with previously unknown disease burden, allowing for treatment and reduction in the likelihood of transmission. The improvement in blood supply has also improved the reputation of the healthcare system in Dubai with Dr. May Yassin Raouf stating, “We pride ourselves in having a premier, safe and sustainable blood supply in Dubai.”

THREE KEY TAKEAWAYS:

- Maximizing blood donations helps ensure a continuous and reliable supply of blood products for patient therapies.
- Media strategies for marketing can play an essential role in attracting new donors, particularly in the younger population.
- Accurate and reliable screening of blood products is critical to ensure a safe blood supply and mitigate risk of transfusion transmitted infectious diseases.

To donate blood at a location near you, visit: <https://www.bethe1donor.com/donate>.

News from the IFCC Website

eJIFCC Vol 30 n°3 - October 2019

The October 2019 eJIFCC is now available.

In this issue: Recommendations on measurement units—why and how, an article on behalf of the IFCC-IUPAC Committee on Nomenclature for Properties and Units (C-NPU). Among other articles: Evaluation of visual serum indices measurements and potential false result risks in routine clinical chemistry tests in Addis Ababa, Ethiopia; Best practices in the implementation of a point of care testing program: experience from a tertiary care hospital in a developing country; and Prevalence of liver function test abnormality and associated factors in type 2 diabetes mellitus: a comparative cross-sectional study. A Case Report and a Letter to the Editor complete the issue.

NEWS FROM REGIONAL FEDERATIONS AND MEMBER SOCIETIES

Biomedical Society of Zambia and African Federation of Clinical Chemistry Collaborative Conference

25-27 April 2019
Livingstone, Zambia

by Hilari Lumano

*Past-President, Biomedical Society of Zambia (BMSZ)
Secretary, African Federation of Clinical Chemistry
and Laboratory Medicine (AFCC)
Senior Advisor Laboratory Services
Supporting an AIDS Free Era (USAID SAFE) Project in Lusaka, Zambia*

The Biomedical Society of Zambia (BMSZ) hosted its annual scientific symposium and annual general meeting (AGM) which attracted biomedical practitioners from across the country from 25 to 27 April 2019 in Livingstone. The event was supported by the Zambia Ministry of Health (MoH), Cooperating partners, AFCC and the Corporates. A total of one hundred and thirty (130) members were in attendance and two parallel symposia were held under the theme, “**The HIV and Non-Communicable Diseases double burden: the role of biomedical laboratory professionals in detection, screening and treatment**”.

The conference featured various themes including non-communicable diseases, Laboratory services cross cutting patient care, clinical laboratory and Public Health, accreditation and success stories.

One of the invited speakers presenting on the Use of Gene X-pert in the diagnosis of chronic myeloid leukaemia

The meeting placed significant emphasis on implementation of quality management systems and accreditation

African Federation of Clinical Chemistry and Laboratory Medicine (AFCC) drive for continuous professional development

AFCC hosts Blood Gas Symposium in Johannesburg

by Hilari Lumano

Secretary, African Federation of Clinical Chemistry and Laboratory Medicine

AFCC, in collaboration with Radiometer, hosted a Blood Gas Symposium on 18 September 2019, in Johannesburg, South Africa, at which 25 people attended. In its continuous effort to promote professional development AFCC collaborated with the South African Association of Clinical Biochemistry (SAACB).

UNDERSTANDING THE VALUE OF BLOOD GASES

The Blood Gases workshop was designed to offer participants an understanding of normal ranges for arterial blood gas values. The use of the five-step approach to arterial blood gas interpretation, identification of some common causes of arterial blood gas abnormalities and what to do to correct them were all highlighted during the training.

The workshop further emphasized best practices in point of care blood collections and summed it up by discussing quality indicators and prevention of errors in point of care testing. Prof. Omar discussed at length the latest development on fluid management and impact on blood gases.

Radiometer also gave a demonstration of their blood gas instrument. They distributed brochures and also demonstrated the correct use of their syringes.

Professors Erasmus and Pillay with Dr. Mukhanova and participants at the Blood Gas Symposium hosted recently in Johannesburg, South Africa

Participants listen to a brief talk by Radiometer at display table

News from the Canadian Society of Clinical Chemistry (CSCC)

Highlights from the recent CSCC Meeting in Saint John, New Brunswick, Canada

Attendees watching the mock trial as part of the Forensics in Laboratory Medicine Symposium.
On stage from left to right: Curtis Oleschuk, Patrick Wilbur, Lucie Mathurin, and Frederick Strathmann

The 2019 Canadian Society of Clinical Chemists (CSCC) conference was held on June 2-5, 2019 in Saint John, New Brunswick, Canada. This year's Opening Keynote Address was given by Dr. Duncan Webster from Horizon Health Network. Dr. Webster, an infectious disease physician, spoke passionately on the topic of the converging public health crises of Infectious Diseases and Substance Use Disorders.

The first symposium of the meeting, Forensics in Laboratory Medicine, began with an introductory talk by **Dr. Frederick Strathmann** of NMS Laboratories.

(L-R): Albert Fraser, Peter Kavsak, Ted Dunn (CSCC President)

Attendees at the University of Toronto Alumni event where the 50th anniversary of the Postdoctoral Training in Clinical Chemistry was celebrated

The latter part of the symposium included a mock trial involving a drug-related death of a teenage boy who had consumed the novel psychedelic, 25I NBOMe. The session started with an overview of the case provided by The Honourable Lucie Mathurin, followed by expert witness testimony by Dr. Matthew Bowes, Nova Scotia Chief Medical Examiner. Then, a roundtable panel discussion was held by the presenters as well as by Patrick Wilbur, New Brunswick Crown Prosecutor.

The theme of the second symposium was “When one size fits all doesn’t fit”.

Dr. Cynthia Balion kicked off the session with a presentation regarding the development of reference intervals for older patients.

The second presenter was **Dr. Sharon Mortimer** who provided an overview of gamete assessment by the assisted reproductive technology (ART) laboratory.

This was followed by the 2nd Annual Lightning Talks, where three trainees were paired with a veteran clinical chemist, and each duo presented on a similar topic including premature infants and the special considerations required for this fragile population, ethnicity specific reference intervals, and transgender individuals. The format of these presentations is 15 slides that automatically advance every 20 seconds.

The People’s Choice Award winner was **Dr. Zahraa Mohamed-Ali**, and the Team Award went to the dynamic duo of **Dr. Heather Paul** and **Dr. Lawrence de Koning** from the University of Calgary.

The third symposium was all about artificial intelligence (AI) and its applications in laboratory medicine.

Johan Saba of *Seed AI* in Montreal gave an introduction to AI and machine learning (ML).

Dr. Jason Baron of Harvard Medical School and Massachusetts General Hospital presented on applications of analytics and ML in clinical lab diagnostics.

Finally, **Dr. Ma'n Zawati** of the Centre for Genomics and Policy at McGill University shared some of the ethical and legal considerations surrounding AI, with a focus on mobile health apps.

The last symposium of the meeting focused on harmonization of quality.

The symposium began with **Dr. Vincent de Guire** from l'Hôpital Maisonneuve-Rosemont in Montréal discussing the need for a standardized quality indicator program, which is currently underway in collaboration with Dr. Mario Plebani and the IFCC.

The next speaker, **Dr. Jennifer Taher**, discussed recent developments from the CSCC hRI group.

Dr. Thomas Streichert from the University of Cologne discussed indirect methods of reference interval determination.

Finally, **Dr. Lisa Hicks** from St. Michael's Hospital and the University of Toronto, provided a welcomed clinician perspective on laboratory utilization.

Members of the conference organizing committee at the closing banquet. From left to right: Ted Dunn, Ed Randell, Nicolas Tetreault, Allison Venner, Lori Beach, Jennifer Shea, Dana Bailey, Vilte Barakauskas, and Paul Yip

News from the Spanish Society of Laboratory Medicine (SEQC^{ML})

SEQC^{ML} participates in Latin American Congress of Clinical Biochemistry for the first time

SEQC^{ML}

COLABIOCLI

- **Specifically, it has collaborated in two complete symposia (POCT and Accreditation) and also in several talks on Neonatal Screening and Education**
- **The SEQC^{ML} has agreements with various societies and the next challenge will be for Latin American professionals to begin to participate directly in some work groups and commissions and feel active and recognized in the Society**

On September 11, 12, and 13, the **XXIV Latin American Congress of Clinical Biochemistry**, the most important scientific event in this region in the Clinical Laboratory field, took place in Panama.

Held biennially, it is organized by the Latin American Confederation of Clinical Biochemistry - which includes 21 countries - and offers an extensive scientific program with conferences, symposia, and courses in the various current core thematic areas of interest to all Clinical Laboratory professionals nationally and internationally.

For the first time, the Spanish Society of Laboratory Medicine (SEQC^{ML}) has participated in this Congress. This represented a key opportunity to strengthen collaboration with Latin American countries, a strategic objective for the SEQC^{ML}.

Specifically, it collaborated in two complete symposia (POCT and Accreditation) and also in other talks in Neonatal Screening and Education. In total it was represented by 5 SEQC^{ML} members and 7 presentations.

Doctors Imma Caballé, president of the SEQC^{ML}, and José Ángel Cocho, member of the Board of Directors,

summarize the presence of the Society in the Congress and its importance.

Assessment of the presence of the SEQC^{ML} in the Congress

This is the first time we went collectively, representing the SEQC^{ML}, although previously there had been collaborations at an individual level. This participation is the result of the acceptance in 2017 of the Society as an associate member of COLABIOCLI.

We believe that the presence of Spanish experts is important because collaboration with Latin American countries is a strategic objective for the SEQC^{ML}. It is a geographical area where we believe that we can find professional groups with which to make advances in Laboratory Medicine. We also believe a lot of work carried out here over the years and through our different committees and commissions (scientific, quality, education, etc.) can be of great use to them.

We have created a demanding plan for ourselves, and one which we believe to be generous towards COLABIOCLI, by participating in several symposia and financing almost all of our participation.

On this occasion we collaborated in 2 complete symposia (POCT and Accreditation) and also various talks on Neonatal Screening and Education.

Topics and main news of the Congress

We believe that everything related to Laboratory Quality and Accreditation is important, which is why we collaborate on it.

Drs. Francisco Bernabeu, Imma Caballé, Antonio Buño, Paloma Oliver and José Ángel Cocho represented the SEQC^{ML} in the Congress

In addition, it is worth mentioning the symposiums in which we participated, such as POCT, Neonatal Screening, and Professional Training in different countries.

We would also like to highlight the AEFA symposium on Fertility Preservation and the IFCC Symposium on Quality in Molecular Biology.

Importance of sharing knowledge with experts from other countries, in this case from Latin America

We believe that this gives the SEQC^{ML} a greater international projection given the fact of having a common language.

We already have this through our participation in working groups of the EFLM and IFCC, and we believe that we can work here in a more broad-based

way and on some issues from a position of co-lead-ership with several of the member countries of the COLABIOCLI.

The SEQC^{ML}, as a Spanish representative in international organizations, such as the IFCC and EFLM, acts as a unifying bridge with Latin American countries.

In other cases it responds to the SEQC^{ML}'s supportive approach, since in the smaller countries the scientific societies have more difficulties.

Key points of the symposium “The laboratory as a fundamental pillar of Point-of-Care Testing (POCT)”, in which the SEQC^{ML} participated on Thursday, September 12

This symposium was organized entirely by experts from SEQC^{ML}, Dr. Paloma Oliver and Dr. Antonio Buño.

Their discourse covered topics such as: What do we mean by POCT? Where can we use it? What is the evidence of benefits of POCT for the patient? They also discussed the main activities of the SEQC^{ML} POCT Commission.

Regarding the “Laboratory accreditation” symposium on Friday, September 13

The Society participated in three talks. The first, by Dr. Francisco Bernabeu, addressed how the Accreditation 15189 and 22870 process for Clinical Laboratories is carried out in Spain and in other European countries, and at what point it finds itself.

The second talk, given by Dr. Imma Caballé, dealt with Accreditation in a multidisciplinary and high-volume laboratory. In the third talk, Dr. José Ángel Cocho presented the topic of Accreditation in a specialized laboratory.

The SEQC^{ML} is a fundamental agent in both training and external quality control programs and collaborates very closely with ENAC (National Accreditation Entity). We believe that it has room for growth within some COABIOCLI countries and we would like to work with them directly.

EFLM e-Learning platform – a personal perspective

by Prof. Dr. Darko Cernel

Chair, EFLM WG-DE

Dr. Paul Hamilton

Corresponding Member, EFLM WG-DE

EFLM runs a dedicated e-Learning platform since winter 2017. Currently, we noticed several new interesting activities and we would like to report here a personal perspective of two EFLM officers.

Prof. Dr. Darko Cerne

I am the current Chair of the Working Group for Distance Education and e-Learning (WG-DE) of the European Federation of Clinical Chemistry and Laboratory

Medicine (EFLM). Ours is one of four working groups of the Education Committee at EFLM. We have ten members, from various constituent national societies.

The previous Chair was Dr. Daniel Rajdl, who still acts as a consultant to the group. The main mission of the WG-DE is to establish and maintain efficient distance learning channels between EFLM and its National Societies.

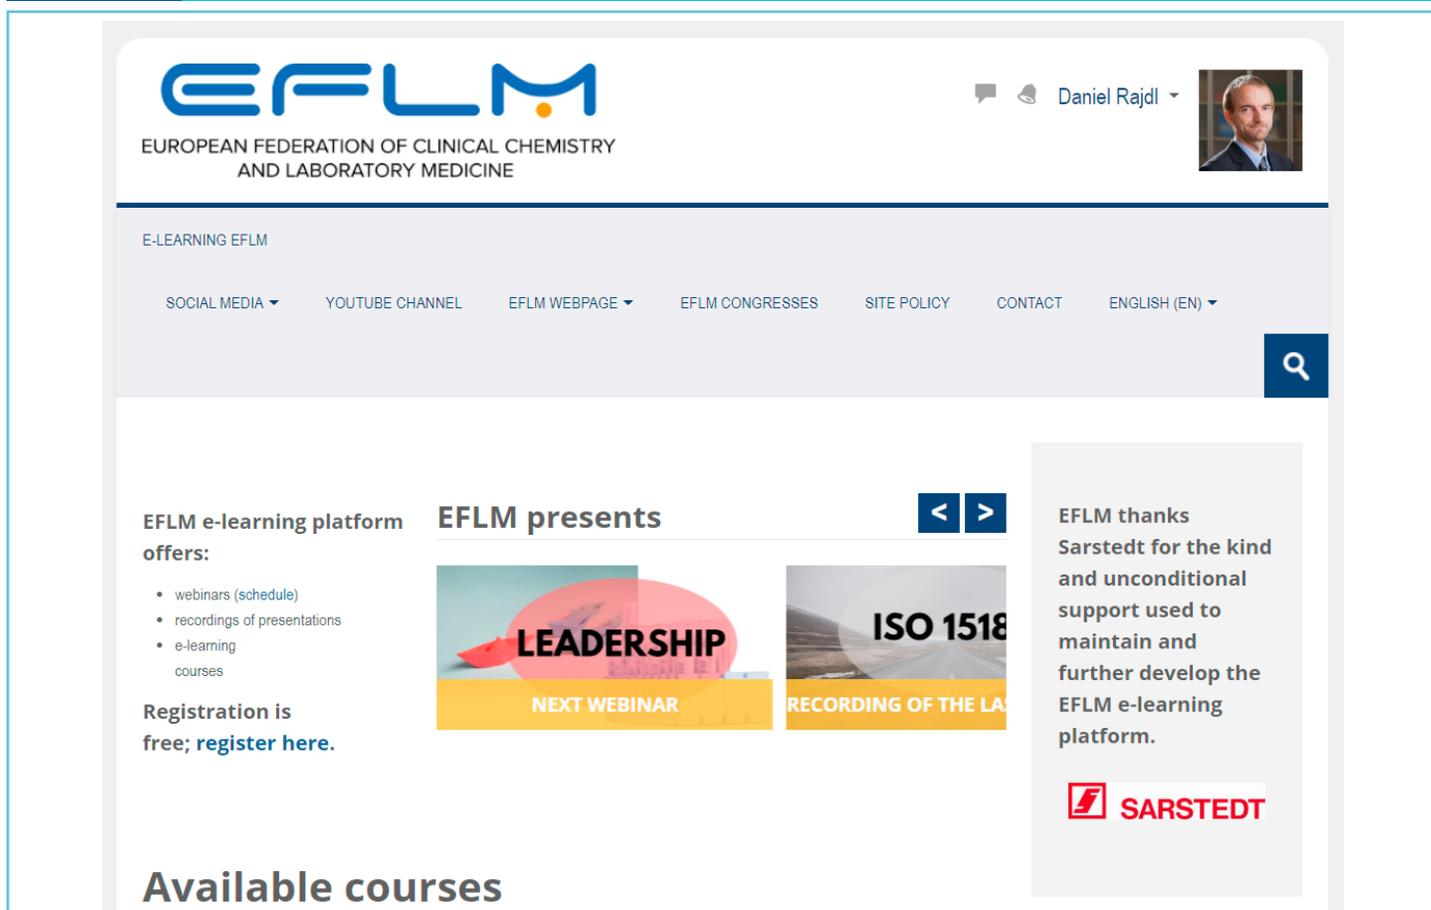

Figure 1

Recording of the opening lecture from EuroMedLab in Barcelona. Audiovisual recording is accomplished by an interactive content – questions inserted directly into the video.

Opening lecture

The screenshot shows an interactive video player interface. On the left, a diagram illustrates a biological process: a green cell on the left emits a red lightning bolt towards a central blue cell. This central cell is surrounded by labels: 'cytokines', 'chemokines', 'growth factors', 'fibrotic factors', and 'ECM proteases'. An arrow points from this central cell to a box labeled 'immunclearance (Mφ, NKs)', which in turn points to a green box labeled 'repair'. On the right side of the video frame, a man in a suit is speaking at a podium with a nameplate that reads 'M. SERRANO'. At the bottom of the video frame, there are logos for 'ifcc', 'EFLM', 'SEQC^{ML}', and 'BARCELONA EUROMEDLAB 2019 May 18-22'. Below the video frame is a standard video player control bar with a play/pause button, a progress bar showing 5:58, and various icons for volume, full screen, and settings.

Figure 2 EFLM e-Learning platform title page

To accomplish this mission, we organize an average of six webinars each year that cover the most current issues in laboratory medicine. Recent topics have included harmonization of autoimmune tests, preparation for ISO 15189 accreditation, leadership management for laboratory professionals, monitoring of internal quality control systems using patient data, unmet clinical needs assessment for biomarker evaluation, new parameters of haematology analysers and new sepsis biomarkers.

Our second most important activity is the recording of lectures at congresses co-organized by EFLM. This enables those who were unable to attend the congress to access these learning opportunities.

Our latest activity is to make interactive videos. To do this, we add interactive questions to recorded webinars and congress lectures (Figure 1). Such interactive content is very motivating and offers the possibility for certification after video playback is completed, provided the questions have been answered correctly.

All the above mentioned activities and many others are placed on the EFLM e-learning platform (<https://elearning.eflm.eu/>), which is just now undergoing an important rejuvenation (Figure 2).

Dr. Paul Hamilton

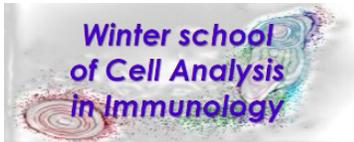

I was appointed as a Corresponding Member of the working group in June 2019. My experience in Distance Learning stems mainly from my involvement with the IFCC's e-Academy, since I perform a coordinator role for that platform.

I have been extremely impressed by the hard work that is undertaken by the group and the quality of the online materials that are freely available to all registered users.

I see the EFLM and IFCC e-learning resources as complementary. Both provide excellent resources for trainees and laboratory professionals undertaking continuous professional development. I would encourage all readers to take a look at what is on offer.

IFCC'S CALENDAR OF CONGRESSES, CONFERENCES & EVENTS

Calendar of IFCC Congresses/Conferences and Regional Federations' Congresses

Nov 17 - 20, 2019		<i>APFCB Regional Congress 2019</i>	Jaipur, IN
Mar 9 - 12, 2020		<i>Winter School on Cell Analysis in immunology</i>	Geneva, CH
